Time Perspective Therapy: Transforming Zimbardo's Temporal Theory into Clinical Practice

Abstract

Based on Zimbardo's Temporal Theory, Time Perspective Therapy (TPT) was developed by Richard and Rosemary Sword as a new therapeutic clinical skill as described in *The Time Cure* (Zimbardo et al., *The time cure: Overcoming PTSD with the new psychology of time perspective therapy*. Jossey-Bass, San Francisco, 2012) A 4 year pilot study which evaluated the effectiveness of TPT by following 29 veterans clinically diagnosed with chronic and severe PTSD indicates long-lasting decreases of self-reported depression, anxiety, and PTSD symptoms. In addition, participants reported affirmative shifts in their time perspectives that trended towards the healthier ideal. The importance of the ZTPI as a groundbreaking tool in determining clinical evaluations and change, as well as two actual case studies are detailed in this chapter.

Richard M. Sword, Rosemary K.M. Sword, and Sarah R. Brunskill

In October 2008, Dr. Philip Zimbardo was the keynote speaker at the Hawaii Psychological Association (HPA) where he introduced his intriguing new book, *The Time Paradox* (Zimbardo and Boyd 2008) and detailed Temporal Theory (TT). It became obvious to attendees Rick and Rosemary Sword, private practice clinicians
