

State Responsibility And The Direct Broadcast Satellite

In October 2005, the Federal Communications Commission expanded the EAS rules to require EAS participation by digital television broadcasters, digital cable television providers, digital broadcast radio, digital audio radio service, and direct broadcast satellite systems.

Emergency Management (EM)

The broad class of agencies or people involved in the practice of managing emergencies and other incidents of all kinds. Emergency response is a subset of emergency management.

Emergency Management Agency (EMA)

An EMA may also be known as an Office of Emergency Management (OEM), Office of Emergency Services (OES), or by a similar name. It is generally described as a state or local government agency that provides support to the local community in response to an emergency situation.

Emergency Management Assistance Compact (EMAC)

A national interstate mutual-aid agreement that enables states to share resources during times of disaster. EMAC has grown to become the nation's system for providing mutual aid through operational procedures and protocols that have been validated through experience. EMAC is administered by the National Emergency Management Association (NEMA), headquartered in Lexington, Kentucky. EMAC acts as a complement to the federal disaster response system, providing timely and cost-effective relief to states requesting assistance from assisting member states. (Adapted from FEMA-EMAC 2007.)

Emergency Medical Services (EMS)

EMS are types of emergency services dedicated to providing out-of-hospital acute medical care and/or transport to definitive care for patients with illnesses and injuries, which the patient or the medical practitioner believes constitutes a medical emergency.

Emergency Operations Center (EOC)

The EOC provides needed centralized management when a major emergency or disaster strikes. The EOC is an established location/facility in which local and state staff and officials can receive information pertaining to an incident and from which they can provide direction, coordination, and support to emergency operations. This is also where the decision makers and support agencies will report to manage the evacuation. National Incident Management System (NIMS) defines the EOC as, "The physical location at which the coordination of information and resources to support incident management (on-scene operations) activities normally takes place. An EOC may be a temporary facility or may be located in a more central or permanently established facility, perhaps at a higher level of organization within a jurisdiction. EOCs may be organized by major functional disciplines (e.g., fire, law enforcement, medical services), by jurisdiction (e.g., federal, state, regional, tribal, city, county), or by some combination thereof."

Emergency Planning Cycle

The emergency planning cycle includes four basic elements bracketing a disaster: mitigation, preparedness, [disaster], response, recovery, cycling back to mitigation and preparedness. The circle graphic on next page (See Figure G-1) illustrates this cycle. See also Preparedness Planning Cycle.
